CONTENTS OF VOLUME 6

NUMBER 1, MARCH 1977

MARC J. O. ANTEUNIS. Solution Conformation of the Ionophore A23187 and Its Magnesium Salt 1

MAKOTO KOMIYAMA AND MYRON L. BENDER. General Base-Catalyzed Ester Hydrolysis as a Model of the "Charge-Relay" System 13

A. OHNO, T. KIMURA, S. G. KIM, H. YAMAMOTO, S. OKA, AND Y. OHNISHI. Reduction by a Model of NAD(P)H. XI. Stereochemistry of a Lactate Dehydrogenase-Model Reaction 21

MAX BLUM AND JOHN W. THANASSI. Metal Ion Induced Reaction Specificity in Vitamin B_6 Model Systems. The Effects of Zn^{2+} and Cu^{2+} on the 5-Deoxypyridoxal Catalyzed Reactions of α-Phenyl-α-aminomalonic Acid 31

ALAN R. BATTERSBY, PETER W. SHELDRAKE, JAMES STAUNTON, AND MICHAEL C. SUMMERS. Stereospecificity in the Biosynthesis of Papaverine 43

B. R. BRANCHINI, F. M. MIESOWICZ, AND KONRAD BLOCH. Allenic Thioester Hydration Activity of Beef Liver Crotonase 49

ROBERT M. MCGRATH, PHILIP N. NOURSE, DIANE C. NEETHLING, AND NICOLAAS P. FERREIRA. The Diversion of Dimethylallylpyrophosphate from Polyisoprenoid to Cyclopiazonic Acid Biosynthesis in *Penicillium cyclopium* Westling. 53

RICHARD A. M. BLACKBURN, BRIAN CAPON, AND ALLAN C. MCRITCHIE. The Mechanism of Hydrolysis of Phthalamic and *N*-Phenylphthalamic Acid. The Spectrophotometric Detection of Phthalic Anhydride as an Intermediate 71

CORNELIS M. VISSER AND RICHARD M. KELLOGG. Mimesis of the Biotin Mediated Carboxyl Transfer Reactions 79

J. F. BIELLMANN, G. BRANLANT, AND L. WALLÉN. Stereochemistry of Octopine and of Its Isomers and Their Enzymatic Properties 89

JUNZO SUNAMOTO, HIROKI KONDO, HIROSHI OKAMOTO, AND KAZUNARI TAIRA. A Sulfotransferase Model. Covalent Participation of a Macrocyclic Oxime in the Hydrolysis of 2,4-Dinitrophenyl Sulfate 95

ROBERT L. LIPNICK AND JOHN D. FISSEKIS. Cysteine Adduct of Pseudouridine: A Model for Aminoacyl-tRNA Binding to Ribosomes 103

NUMBER 2, JUNE 1977

C. S. TSAI. Substituent Effects in Alkylated Liver Alcohol Dehydrogenases 117

MAKOTO KOMIYAMA, EVES J. BREAUX, AND MYRON L. BENDER. The Use of Cycloamylose to Probe the "Charge-Relay" System 127

M. HUGHES AND R. H. PRINCE. Some Aspects of Zinc Ion Involvement in Alcohol Dehydrogenase Catalysis 137

Mohamed A. Abdallah, Jean-Jacques Andre, and Jean-François Biellmann. A New Spin-Labelled Analogue of Nicotinamide Adenine Dinucleotide 157
Junghun Suh and Irving M. Klotz. Catalysis by Modified Polyethylenimine of Nucleophilic Substitution Reactions of Azide Ions 165
Bleecker Springs and Paul Haake. Equilibrium Constants for Association of Guanidinium and Ammonium Ions with Oxyanions. The Effect of Changing Basicity of the Oxyanion 181
D. John Aberhart. A Stereochemical Study on the Metabolism of Isobutyrate in *Pseudomonas putida* 191
B. L. Onisko, H.-Y. Lam, L. E. Reeve, H. K. Schnoes, and H. F. DeLuca. Synthesis and Bioassay of 3-Deoxy-1α-Hydroxyvitamin D_3, an Active Analog of 1α, 25-Dihydroxyvitamin D_3 203
Announcement 219

NUMBER 3, SEPTEMBER 1977

Introduction
Derek Barton. In Memoriam 221
Yoshio Ushijima, Frances M. Finn, and Klaus Hofmann. Bovine Adrenocortical Adenylate Cyclase: Some Properties of the Solubilized, Fluoride Activated Enzyme 223
Murray Goodman, Philip Keogh, and Harry Anderson. Racemization Studies in Peptide Synthesis Using High Pressure Liquid Chromatography 239
Teisuji Kametani, Yohko Ohta, Makoto Takemura, Matsaka Ihara, and Keiichiro Fukumoto. Biotranscription of Reticuline into Coreximine, Scoulerine, Palladine, and Isoboldine with Rat Liver Enzyme 249
Frederick E. Brot, William S. Johnson, Bruce E. Ratcliffe, and Gary D. Stelling. Biomimetic Polyene Cyclizations. The Synthesis and Cyclization of 2-(4-Pentenyl)-2-Cyclohexenol 257
D. Perlman, K. L. Perlman, M. Bodanszky, A. Bodanszky, R. L. Foltz, and H. W. Matthews. Microbial Production of Vitamin B_{12} Antimetabolites. II. 2-Amino-4-Keto-3-Methylpentanoic Acids from *Bacillus cereus* 439 263
Edward Leete. The Incorporation of [5,6-$^{13}C_2$]Nicotinic Acid into the Tobacco Alkaloids Examined by the Use of ^{13}C Nuclear Magnetic Resonance 273
Eiichi Fujita and Yoshimitsu Nagao. Tumor Inhibitors Having Potential for Interaction with Mercapto Enzymes and/or Coenzymes. A Review 287
Fu Chi Huang, Milton Zmijewski, Gary Girdaukas, and Charles J. Sih. Concerning the Biosynthesis of Prostaglandin I_2 311
Makoto Komiyama and Myron L. Bender. Cycloamylose-Accelerated Cleavage of Acylimidazoles 323
Thomas Gillan, Gideon Mor, Frederick W. Pepper, and Saul G. Cohen. Preferred Hydrolysis of Methyl D-Pyroglutamates (5-Carbomethoxy-2-Pyrrolidones) by α-Chymotrypsin 329

KENNETH L. RINEHART, JR., WOJCIECH SOBICZEWSKI, JOY FREIDINGER HONEGGER, RUDYARD M. ENANOZA, THOMAS R. WITTY, VING J. LEE, LOIS S. SHIELD, L. H. LI, AND FRITZ REUSSER. Synthesis of Hydrazones and Oximes of Geldanaldehyde as Potential Polymerase Inhibitors 341

KENNETH L. RINEHART, JR., MOSES W. MCMILLAN, THOMAS R. WITTY, CRAIG D. TIPTON, LOIS S. SHIELD, L. H. LI, AND FRITZ REUSSER. Synthesis of Phenazine and Phenoxazinone Derivatives of Geldanamycin as Potential Polymerase Inhibitors 353

REVIEW

JAMES P. KUTNEY. Synthetic Studies in the *Veratrum* Alkaloid Series. The Total Synthesis of Verarine, Veratramine, Jervine, Veratrobasine, and Verticine 371

COMMUNICATIONS

BRUCE GANEM AND GENE W. HOLBERT. Arene Oxides in Biosynthesis. On the Origin of Crotepoxide, Senepoxide, and Pipoxide 393

M. KAJIWARA, K. S. HO, H. KLEIN, A. I. SCOTT, A. GOSSAUER, J. ENGEL, E. NEUMANN, AND H. ZILCH. Biosynthesis of Vitamin B_{12}. Concerning the Mechanism of the Uro'gen III → Cobyrnic Acid Transformation .. 397

NUMBER 4, DECEMBER 1977

HENDRIK J. VAN RAMESDONK, JAN W. VERHOEVEN, AND THYMEN J. DE BOER. ^{1}H-nmr Study on the Preferred Conformations of Chiral Pyridine-Dinucleotide Models 403

Information for Authors

Bioorganic Chemistry: An International Journal publishes accounts of research on the organic and physical organic chemistry of biological or biologically related reactions. Within this context, manuscripts treating the following topics are suitable for submission:

> New enzymic reactions in which the chemistry is apparent by way of starting material and product structures; the elucidation of enzyme reaction mechanisms from the physical organic standpoint; the isolation and structure determination of new natural products which have implications for basic biological reactions; biogenetic-type organic synthesis, in which there are executed non-enzymic reactions based upon substrate behavior in biological processes; the synthesis and behavior of model enzymes; the molecular structure and chemical behavior of enzymes; prebiotic and evolutionary organic chemistry; the chemistry of biopolymers; molecular pharmacology.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Bioorganic Chemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Regular articles must feature novel, previously unpublished material or represent full accounts of findings published earlier in preliminary form. Contributions may be either experimentally oriented or entirely theoretical. Articles that are sensibly speculative or constitute new interpretations of older findings are appropriate. Although there is no provision for expedited publication of preliminary disclosures, the editors will consider manuscripts which feature significant new results, described briefly and without a separate experimental section.

Reviews containing apposite subject material are welcome. An acceptable review may embrace the results of various workers in a given area or may feature recent developments from the author's own laboratory. A review that is distinguished by a novel interpretation or representation of earlier findings is especially suitable. Announcements of meetings, new books, or other developments of interest to the bioorganic chemist will be printed upon request.

Address all submitted manuscripts and correspondence to

Dr. Eugene E. van Tamelen
Editor, *Bioorganic Chemistry*
Department of Chemistry
Stanford University
Stanford, California 94305.

Manuscripts should be written in a clear and accurate fashion with careful attention to detail. Submit manuscripts (preferably in English) in triplicate, including the original typewritten copy, with copies of graphs, drawings, organic structural formulas, etc., suitable for direct reproduction by the photoengraver. All material (including tables, legends, reference lists, and footnotes) should be typed double spaced on one side of $8\frac{1}{2} \times 11$-in. white bond paper with 1-in. margins on all sides. Each page of the manuscript should be numbered. Page 1 should contain the article title, author's name (without degrees), affiliation, a short running title (not exceeding 45 letters and spaces), and an address to which proof should be mailed. Page 2 should contain a short abstract. Acknowledgments may be included as a separate section.

All nomenclature should be simple, unambiguous, and in conformity with the conventions developed by Chemical Abstracts and the International Union of Pure and Applied Chemistry.

In the Methods Section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Abbreviations should be in accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Common abbreviations are: meter, m; centimeter, cm; millimeter, mm; micrometer, μm; nanometer, nm; kilogram, kg; gram, g; milligram, mg; microgram, μg; nanogram, ng; milliliter, ml; microliter, μl; molar, *M*; millimolar, m*M*; micromolar μM; normal, *N*; millicurie, mCi; microcurie, μCi; counts per minute or second, count/min or count/sec; disintegrations per minute or second, dpm or dps; centigrade, °C; seconds, sec; minutes, min; hours, hr; standard deviations, SD; standard error, SE; percent, %; melting point, mp; boiling point, bp; calorie, cal; kilocalorie, kcal; nuclear magnetic resonance, nmr; infrared, ir; ultraviolet, uv; number, No.; Ångstrom units, Å; cycles per second, cps; parts per million, ppm; equation, Eq.

Tables must appear on a separate sheet with a descriptive title typed double spaced above the table. Tables must be numbered consecutively with Arabic numerals in order in the text.

Figures and graphs are to be numbered consecutively in Arabic numerals and cited in order in the text; legends should be typed double spaced on a separate sheet. Graphs should be plotted with black India ink on white paper no larger than 8.5 × 11 in., with coordinates properly labeled; grid lines that are shown in the engraving should be inked in black. Original drawings no larger than $8\frac{1}{2} \times 11$ in. (21 × 27.5 cm) are preferred. The following standard symbols should be used in the legends to the figures because they are readily available to the printers:

▲ □ ■ ○ ● ⊙ × ◊ ♦.

Photographs should be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Structural formulas and chemical equations should be typed or drawn with care, and arranged to fill space economically. Since chemical structures will be engraved directly from manuscript copy, authors are asked to prepare such material using appropriate templates and to check it carefully before manuscript submission.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet, starting with the title; in tables they should be noted by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by underlined Arabic numerals in parentheses. They must appear on a separate sheet, listed in numerical order—i.e., in accordance with order of citation in the text. Styling of references should conform to the following format (authors should refer to Chemical Abstracts' *Service Source Index* for styling of journal titles):

1. L. G. Longsworth, R. K. Cannan, and D. A. Macinnes, *J. Amer. Chem. Soc.* **62**, 2580 (1940).
2. R. B. Woodward and R. Hoffmann, "The Conservation of Orbital Symmetry," 2nd ed., Vol. 1, pp. 15–20. Academic Press, New York, 1970.
3. L. G. Longsworth, "Electrophoresis" (M. Bier, Ed.). Academic Press, New York, 1969.

Galley proofs will be sent to the senior author. Authors will be charged for alterations in excess of 10% of the cost of composition.

Fifty reprints of each article will be supplied free of charge. Additional reprints may be purchased; an order form will accompany proofs. There are no publication charges.
